Who We Are

Kintsugi Visual is a creative visual communication studio specializing in architectural visualization (still image, animation, 3d modeling, and virtual reality).

We use our expertise to unify and turn all your ideas into reality.

Our tagline "Unifying Your Ideas" is inspired by the main philosophy behind our company name, Kintsugi.

Kintsugi is a unique form of art from Japan where broken pottery is made into one with lacquer dusted or mixed with powdered gold.

Our Services

Still Image

Still images are the fundamental and the core of architectural industry.

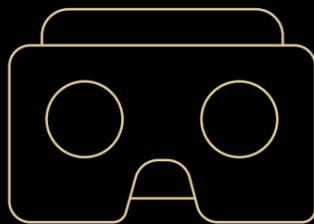

Through still images you will be able to bring all of your breakthrough architectural innovations into reality in the form of photorealistic 3D rendering perspective images.

3D Modelling

3D modeling is one of the most commonly used visual services to leverage certain products/services values.

Instead of presenting certain objects in a "blurry way" through 2D perspective, we will take your objects one step further through 3D perspective.

Virtual Reality

Virtual Services are gonna be the next big things in architectural industry.

We will use interactive virtual reality and/or 360 spherical images which enable our partners to feel the whole "actual experience" of their architectural projects or ideas as if they're actually in

Animation

Virtual Services are gonna be the next big things in architectural industry.

Through our animation service, we are aiming to bring and convey the story or message behind your design into reality.

Virtual Reality

Virtual Reality in Architecture Industry

VR technology has become one invention that offers thousand possibilities for architects and designers. It is capable to sell an idea better than any other medium whether it is initial design mock-ups, project collaboration, or even the finishing touch needed.

The biggest obstacles for architects or designers right now is how they are able to sell their ideas to the clients. They need to convince the clients that their design really works.

Moreover, as the project is getting bigger, more stakeholders will be involved. There will be many inputs and feedbacks on various aspects of the design. It is very difficult to have them in one room at one time to focus on discussing one single design.

Many other medias such as floor plans, 3D rendering, and models are often used to deliver the idea to the stakeholders. However, they might still fail to communicate the main essence to the stakeholders.

This is where VR steps up by bringing the users into a fully interactive 3D environment. The users will be able to fully experience the design itself. They can explore around, interact with the object, and take a look closely to the details of the room, floor, or building as a whole.

Industrial Cafe // Experimental Project

Inspired by one of Coperaco Coffee Cafe in USA, we chose an Industrial-themed Cafe to give the cafe a different feel and turns out it works really well on the scene.

Living Room // Experimental Project

The point of this project is to provide young adult's needs of comfortable space in their house, by combining modern and luxurious style, we want to deliver a cozy and homey feeling in this family space.

Ensuite // Experimental Project
We tried to deliver different feel inside the room and gave several vintage shot to tell more stories of the scene.

Master Bedroom // Experimental Project

One of our classic master bedroom style, we want to show how lux the design is yet still comfortable as a bedroom.

Toorak Residence // Experimental Project
Designed by the infamous Coco Republic, it really attracted our attention. The room is really well-designed and brings the comfortable feeling for the occupants.

Toorak Residence // Experimental Project
Kitchen shot for Toorak Residence.

Toorak Residence // Experimental Project
Vintage shot for Toorak Residence.

Xan House // Experimental Project

Our latest experimental project on visualizing architectural breakthrough idea by MAPA.

Rudolph the Red Nose Reindeer // Experimental Project

Created for Christmas day back in 2018, we chose Rudolph as our main actor, a Christmas tree, gifts under the tree and a fireplace added on the background to complete the Christmas vibe. We want to show how warm the room on a cold Christmas night.
